Assignment 1

Code Selection Sheet

Students:

NAME: ID#:

Mohammad Othman

NAME: ID#:

Instructor: Faisal Shehadeh

1) Project Information

Project name: Contacts-Management-System-Using-Java - repository link: [Github](#).

Programming language: Java (100%).

2) Selected Code Scope (Modules / Files)

This project follows a simple layered structure with multiple packages: Driver, Entity, Repository, Service.

Files selected for inspection (interacting modules):

1. Driver/ContactDriver.java (main menu + user interaction)
2. Entity/Contact.java (contact data model)
3. Repository/Database.java (in-memory storage)
4. Service/Operations.java (core CRUD + call simulation logic)

3) Code Size (LOC) : 445 across all classes.

4) What the system does

The application allows managing contacts through a console interface, including features such as: add contacts, search, edit, delete, show all contacts, simulate calling a contact, view call history, and mark favorites.

5) Why this repo is suitable for Code Inspection

- It is a real open-source GitHub project with visible commit history (2 commits) for evidence.
- The code is organized into multiple interacting modules (Driver/Service/Repository/Entity), which is good for checking modularity, coupling, cohesion, and structure.
- It includes enough business logic (CRUD + history + favorites) to find defects in logic, validation, error handling, and documentation.
